PROFESSIONAL SUMMARY

AI Systems Architect & Full-Stack Engineer specializing in scalable SaaS platforms, robust LLM integrations, and intelligent automation pipelines. Adept at decoupling complex architectures, managing cloud infrastructure, and bridging the gap between AI capabilities and resilient backend engineering to deliver high-availability, production-ready solutions.

TECHNICAL EXPERTISE

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React.js, Next.js (App Router), Tailwind CSS, Framer Motion

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Zod, bcrypt

Databases: PostgreSQL (Neon Serverless), MongoDB, Prisma ORM, MySQL

AI & Orchestration: LLaMA 3, Groq API, OpenAI API, Prompt Engineering, n8n Automation

DevOps & Cloud: AWS (EC2, RDS, S3), Oracle Cloud, Docker, Vercel, CI/CD, Web Push (VAPID)

PROFESSIONAL EXPERIENCE

Lead AI Systems Architect — Makhija Quantum AI

Nov 2025 – Present

Mumbai, India

- Architected and deployed a highly available AI automation infrastructure, decoupling backend services from workflow orchestration to ensure scalable fault tolerance for B2B client onboarding.
- Engineered a high-throughput backend service layer using Python, eliminating manual lead-routing bottlenecks by automating 100% of incoming multi-channel communication workflows.
- Provisioned PostgreSQL databases on AWS RDS with a multi-tenant schema architecture, prioritizing strict data isolation and scalable ACID compliance.
- Designed a robust CI/CD strategy utilizing Docker across AWS and Oracle Cloud, maintaining continuous delivery and minimizing production downtime.
- Built complex, event-driven n8n automation pipelines processing multi-step data transformations across WhatsApp, Instagram, and LinkedIn webhooks with zero-downtime event logging.

KEY ARCHITECTURAL PROJECTS

TaskOS — AI-Powered Productivity Operating System

Live Platform — GitHub Repository

- Architected a domain-driven Next.js 15.5 application utilizing a Neon Serverless PostgreSQL database, engineering 12 heavily indexed relational models with Prisma ORM for type-safe data transactions.
- Integrated LLaMA 3 70B via the Groq API to power a real-time AI productivity coach, implementing specialized domain layers for algorithmic task decomposition and streak-risk analysis.
- Engineered a robust authentication pipeline combining Google OAuth 2.0 with custom JWT middleware guards, enforcing rate limiting and Zod-based strict request validation across 14 API route groups.
- Designed a decoupled micro-service architecture to handle complex asynchronous tasks, including Web Push (VAPID) notifications, AWS S3 presigned avatar uploads, and Razorpay payment webhook processing.
- Developed custom, dependency-free SVG analytics pipelines to visualize task completion matrices and habit consistency heatmaps in real-time.

WordSage — AI-Powered Enterprise Writing SaaS

Live Platform — GitHub Repository

- Architected an enterprise-grade AI SaaS platform leveraging Next.js and TypeScript, utilizing a schema-first approach to ensure rigorous type safety across the full stack.
- Designed scalable REST APIs to execute compute-heavy LLM workflows, optimizing asynchronous execution to maintain sub-second response times for text expansion and summarization features.
- Engineered a secure, multi-tenant architecture featuring strict role-based access control (RBAC), effectively isolating data across user workspaces.

- Integrated an end-to-end monetized infrastructure via Razorpay, implementing secure webhook verification and encrypted OAuth session management.

EDUCATION

Bachelor of Science in Computer Science
MVLU, Mumbai

Oct 2022 – Aug 2025
